SUMMARY

Pre-final year Computer Science student interested in open-source, collaborative development, and continuous learning. I started contributing to real-world projects early and also freelance, building and shipping scalable applications based on client requirements.

EDUCATION

B.Tech in Computer Science Engineering Baba Farid College of Engineering & Technology	2024 – 2028
Senior Secondary PCM (science-stream) Rose Marry Convent School	2023 – 2024

SKILLS

Languages — Javascript | Typescript | Java

Frontend — React.js | Next.js | Zustand | GSAP | Three.js | React Native (expo)

Backend — Express.js | Spring Boot

Databases — PostgreSQL | MongoDB | Redis | Prisma ORM | Drizzle ORM | Mongoose

Devops & Infrastructure — Docker | GitHub Actions | NGINX | Linux | DigitalOcean | Terraform | Ansible

Tools & Technologies — Git & GitHub | Electron | Vite | Vercel | Render

PROJECTS

- Aegis**  Architecting a DevSecOps platform that performs automated repository security scanning, AI-driven vulnerability remediation, and intelligent pull request reviews through GitHub Apps. Built as a scalable microservices system using Node.js, PostgreSQL, Redis, BullMQ, Docker, Prisma, and Google Gemini/OpenRouter, with GitHub webhooks, API Gateway, and production infrastructure powered by Terraform, Ansible, and CI/CD.
- BFGI Alumni-Connect Portal**  Engineered a scalable alumni platform for BFGI with real-time communication, feeds, event management, alumni directories, and role-based administration, leveraging Node.js, PostgreSQL, Redis, Kafka, Kubernetes, and ArgoCD for distributed services and automated deployments.
- Gitops-Lite**  Built a full CI/CD pipeline with GitHub Actions, Docker, and NGINX that handles everything from versioning and GitHub releases to automatically deploying a full-stack app to a DigitalOcean droplet — no manual server work needed after a commit.
- ADIZYA'26**  Developed the official Adizya'26 web for NIT Calicut with a dedicated admin portal for dynamic content management, including events, podcasts, sponsors, schedules, and media, along with responsive interfaces for registrations, competitions, workshops, and event discovery.

OPEN SOURCE CONTRIBUTIONS

- Microsoft — vibe-voice**
Identified and fixed a critical resource-leak bug where backend streaming processes persisted after WebSocket client disconnections, causing orphaned processes. Implemented disconnect detection, stop-signal propagation, structured logging, and safe cleanup logic — merged via pull request.
- ZettaNote — Open-Source Note-Taking Platform**
Ranked Top 3 among 50+ contributors in the ZettaNote repository during Hacktoberfest, earning the Super Contributor badge with 6+ merged Pull-Requests. Closed an XSS vulnerability by migrating JWT auth from LocalStorage to HTTP-only cookies, and migrated the frontend from CRA to Vite, improving dev server performance.

ACHIEVEMENTS

- Built and deployed a live kiosk system currently running in BFCET's Admission Block, helping incoming students explore the campus, facilities, and departments from a single screen.
- Contributed to Microsoft's open-source vibe-voice project with a merged PR, and ranked Top 3 among 50+ contributors in ZettaNote during Hacktoberfest — earning the Super Contributor badge.

CERTIFICATES

Git, Github & Github Fundamentals - Udemy
